## MED/MC Managed Care Information System

### ***Meet Today's Managed Care Challenges Head On.***

CPU's MED/MC Managed Care Information System provides the most comprehensive and cost effective solution for managing "at risk" healthcare delivery systems. The robust MED/MC solution streamlines management for all types of integrated health delivery systems including IPAs, PHOs, MSOs and HMOs.

### **MED/MC Features**

- Fully integrated Managed Care Information System
- HIPAA compliant EDI formats
- Logical/user friendly screen navigation
- Comprehensive management reports

### **Maximize Productivity**

MED/MC seamlessly integrates the complexities of administrating eligibility, referral authorization and claims processing. Functions and features maximize data integrity while reducing data entry.

- Member eligibility and benefit history
- Referral management with fax referral authorization
- Claims processing with electronic adjudication using HIPAA compliant formats
- EOBs and check writing
- Multiple payment methodologies
- Provider contract management
- Capitation management
- Member and provider services call tracking
- Letter writing templates
- Premium billing
- Extensive reporting and data warehousing

MED/MC expertly manages multi-specialty, multi-location healthcare delivery systems with flexible fee schedules and extensive reporting capabilities. The system produces over 500 predefined, on-line management reports.

## Managed Care System

MED/MC's master menu provides easy navigation for the complex tasks of member eligibility, referral management and claims processing.

MED/MC's report writer provides users with a variety of ways to select and sort claims data. Users may send the data to a report for viewing or printing or they may download the file and import it into other applications. These are just some of hundreds of standard reporting options.
